

Architecture Meeting – 12 March 2026

Decision 1: We will use React for the frontend.

We evaluated Angular, Vue, and React. React was chosen because the team already has experience with it and it has stronger ecosystem support.

Assumption: the team will stay the same size for the next six months.

Risk: React updates frequently, so upgrades may take extra effort.

Decision 2: We will use PostgreSQL as the database.

MongoDB was also considered but rejected because our data is highly structured. Owner: Priya. Status: Approved.

Risk: the team has limited PostgreSQL experience.
